

## IP3KA (H431) polyclonal antibody

Catalog: BS1959

Host: Rabbit

Reactivity: Human, Mouse, Rat

### Background:

Inositol 1,4,5-trisphosphate (Ins(1,4,5)P<sub>3</sub>) regulates the level of calcium within the cell by releasing calcium from intracellular stores. Ins(1,4,5)P<sub>3</sub> is phosphorylated by inositol 1,4,5-trisphosphate 3-kinase (IP3K) to form inositol 1,3,4,5-tetrakisphosphate (Ins(1,4,5)P<sub>4</sub>), which is thought to regulate the influx of calcium across the plasma membrane. IP3K exists as three isoforms, IP3KA, B, and C. IP3KA, the most highly characterized isoform, is approximately 51 kDa and is expressed in rat brain and testis. IP3KB has a molecular weight of 74 kDa and is expressed in various rat tissues such as lung, thymus, testis, brain, and heart. IP3K activity is stimulated in the presence of calmodulin via phosphorylation by cAMP-dependent protein kinase, protein kinase C, or calcium/calmodulin dependent protein kinase II and, subsequently, mediates the inositol phosphate signaling pathways.
