

CDC42EP3 polyclonal antibody

Catalog: BS71249

Host: Rabbit

Reactivity: Human, Mouse, Rat

BackGround:

This gene encodes a member of a small family of guanine triphosphate (GTP) metabolizing proteins that contain a CRIB (Cdc42, Rac interactive binding) domain. Members of this family of proteins act as effectors of CDC42 function. The encoded protein is involved in actin cytoskeleton re-organization during cell shape changes, including pseudopodia formation. A pseudogene of this gene is found on chromosome 19. Alternative splicing results in multiple transcript variants.
