Recombinant IL-1 β , Porcine

Catalog Number: BK0096-1mg

Source: Escherichia coli.

Quantity: 1mg

Description:

Interleukin-1 beta (rpIL-1 β) is a proinflammatory cytokine produced in a variety of cells including monocytes, tissue macrophages, keratinocytes and other epithelial cells. IL-1 α and IL-1 β are structurally related polypeptides that share approximately 27% amino acid (aa) identity in porcine. While IL-1 α and IL-1 β are regulated independently, they bind to the same receptor and exert identical biological effects. IL-1 β stimulates thymocyte proliferation by inducing il-2 release, b-cell maturation and proliferation, and fibroblast growth factor activity. Recombinant Porcine IL-1 β produced in E.coli is a single non-glycosylated polypeptide chain containing 154 amino acids. A fully biologically active molecule, rpIL-1 β has a molecular mass of 17.7 kDa analyzed by reducing SDS-PAGE and is obtained by chromatographic techniques at GenScript.
