

## PRODUCT DATA SHEET

Bioworld Technology CO., Ltd.

### CHOP (K121) Peptide

Cat No.: BS1136P

#### Background

GADD153 is a small nuclear protein that is capable of dimerizing with transcription factors C/EBP alpha and beta. Once dimerized, this complex inhibits the normal binding and function of C/EBP to classical binding sites. Inversely, the C/EBP GADD153 dimer gains binding activity to other non classical C/EBP stress related targets. Under normal cellular conditions this protein is not expressed in detectable levels, but is highly unregulated during times of cellular/ER stress. Examples of GADD153 inducing stress include: treatment with tunicamycin, nutrient starvation and reducing agents that interfere with the calcium flux across the ER membrane.

#### Swiss-Prot

P35638

#### Applications

Blocking

#### Specificity

This peptide can be used with studies using BS1136 CHOP (K121) pAb.

#### Purification & Purity

Synthetic peptide CHOP (K121). (Note: the amino acid sequence is proprietary). The purity is > 98%.

#### Product

1 mg/ml in DI water.

#### Storage & Stability

Store at 4 °C short term. Aliquot and store at -20 °C long term. Avoid freeze-thaw cycles.

#### Research Use

For research use only, not for use in diagnostic procedure.
