CDK7 (N166) Peptide

Cat No.: BS1524P

Background

Cdk7 is a member of the cyclin dependent protein kinase (CDK) family. CDK family members are highly similar to the gene products of *Saccharomyces cerevisiae* cdc28, and *Schizosaccharomyces pombe* cdc2, and are known to be important regulators of cell cycle progression. Cdk7 forms a trimeric complex with cyclin H and MAT1, which functions as a Cdk activating kinase (CAK). It is an essential component of the transcription factor TFIIF, that is involved in transcription initiation and DNA repair. This protein is thought to serve as a direct link between the regulation of transcription and the cell cycle.
