CD31/PECAM-1 (T709) Peptide

Cat No.: BS1574P

Background

CD31 (Platelet Endothelial Cell Adhesion Molecule-1: PECAM-1), a member of the Ig superfamily of cell adhesion molecules, is expressed by circulating platelets, monocytes, neutrophils, some T cells and endothelial cells, and modulates cell adhesion, endothelial cell migration and angiogenesis. CD31 is phosphorylated on Tyr686 at the cytoplasmic carboxy-terminal tail upon various stimuli (e.g. mechanical stress or oxidative stress), presumably by Src family members. The tyrosine phosphorylation mediates associations with a number of SH2 domain containing binding partners such as PI3-kinase, SHIP, PLC γ and SHP-2. Thus, CD31 serves as a scaffold for various signaling molecules.

Swiss-Prot

P16284

Applications

Blocking

Specificity

This peptide can be used with studies using BS1574 CD31/PECAM-1 (T709) pAb .

Purification & Purity

Synthetic peptide CD31/PECAM-1 (T709) . (Note: the amino acid sequence is proprietary). The purity is > 98%.

Product

1 mg/ml in DI water.

Storage & Stability

Store at 4 °C short term. Aliquot and store at -20 °C long term. Avoid freeze-thaw cycles.

Research Use

For research use only, not for use in diagnostic procedure.
