Rak (N103) Peptide

Cat No.: BS1996P

Background

Src is the human homolog of the v-src gene of the Rous sarcoma virus, also known as avian sarcoma virus or ASV. Src is the first proto-oncogenic nonreceptor tyrosine kinase characterized in human. By virtue of common structural motifs, the Src family is composed of nine members in vertebrates, including Src, Yes, Fgr, Frk, Fyn, Lyn, Hck, Lck and Blk. Src-family kinases transduce signals that are involved in the control of a variety of cellular processes, including proliferation, differentiation, motility, and adhesion. Src-family kinases contain an amino terminal cell membrane anchor followed by an SH3 domain and an SH2 domain involved in modular association and activation, respectively. Frk (Rak) is an epithelial tissue-specific kinase. The human Rak gene maps to chromosome 6q21-q22.3 and encodes a 505 amino acid protein.

Swiss-Prot

P42685

Applications

Blocking

Specificity

This peptide can be used with studies using BS1996 Rak (N103) pAb.

Purification & Purity

Synthetic peptide Rak (N103). (Note: the amino acid sequence is proprietary). The purity is > 98%.

Product

1 mg/ml in DI water.

Storage & Stability

Store at 4 °C short term. Aliquot and store at -20 °C long term. Avoid freeze-thaw cycles.

Research Use

For research use only, not for use in diagnostic procedure.
