

hnRNP G (M40) polyclonal antibody

Catalog: BS2274

Host: Rabbit

Reactivity: Human, Mouse, Rat

BackGround:

hnRNP G is a glycoprotein, which was originally identified as an autoantigen from German shepherd dogs with lupus-like syndrome. The gene encoding hnRNP G is located on chromosome Xq26 and is ubiquitously expressed. It contains one RNP-consensus RNA binding domain (RBD) and is related to RBMY, which is involved in spermatogenesis, and hnRNP G-T, which is a testis specific protein. All three proteins interact with Tra2b and therefore, are involved in pre-mRNA splicing.
