

## ERK8 (D171) polyclonal antibody

Catalog: BS2438

Host: Rabbit

Reactivity: Human, Mouse, Rat

### BackGround:

The ERKs are a subfamily of the MAPKs that have been implicated in cell growth and differentiation. Extracellular signal-regulated kinase 8 (Erk8) is a large MAP kinase whose activity is controlled by serum and the c-Src non-receptor tyrosine kinase. ERK8 down-regulates transactivation of the glucocorticoid receptor through Hic-5 and can negatively regulate transcriptional co-activation of androgen receptor and GR $\alpha$  by Hic-5 in a kinase-independent manner, suggesting a broader role for ERK8 in the regulation of nuclear receptors beyond estrogen receptor  $\alpha$ . Erk8 is a novel effector of RET/PTC3 and, therefore, RET biological functions.

### Product:

Rabbit IgG, 1mg/ml in PBS with 0.02% sodium azide, 50% glycerol, pH7.2

### Molecular Weight:

~ 60 kDa

### Swiss-Prot:

Q8TD08

### Purification&Purity:

The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen and the purity is > 95% (by SDS-PAGE).

### Applications:

IHC: 1:50~1:200

IF: 1:50~1:200

### Storage&Stability:

Store at 4 °C short term. Aliquot and store at -20 °C long term. Avoid freeze-thaw cycles.

### Specificity:

ERK8 (D171) polyclonal antibody detects endogenous levels of ERK8 protein.

### DATA:

BS2438  
Lot: C26131

Immunohistochemistry (IHC) analyzes of ERK8 (D171) pAb in paraffin-embedded human breast carcinoma tissue at 1:50, showing cell membrane staining. Negative control (the right) using PBS instead of primary antibody, secondary antibody is Goat Anti-Rabbit IgG-biotin followed by avidin-peroxidase.

### Note:

For research use only, not for use in diagnostic procedure.
