

Synphilin-1 (R846) polyclonal antibody

Catalog: BS2939

Host: Rabbit

Reactivity: Human, Mouse, Rat

BackGround:

Synphilin-1 (α -synuclein interacting protein, SNCAIP) is a 919 amino acid protein that associates with α synuclein and promotes the formation of cytosolic inclusions in neuronal cells. The synuclein family members, including α -synuclein and β -synuclein, are predominantly expressed in the brain, where they influence synaptic regulation and neuronal plasticity. Synphilin-1 contains modular protein domains, such as ankyrin-like repeats and a coiled-coil domain. While both α -synuclein and synphilin-1 are coexpressed in Lewy bodies of patients with Parkinson's disease, only mutations in the gene for α -synuclein have been determined to confer pathogenicity.
