

## Frizzled-2 (E240) polyclonal antibody

Catalog: BS3163

Host: Rabbit

Reactivity: Human, Mouse, Rat

### BackGround:

The frizzled gene, originally identified in *Drosophila melanogaster*, is involved in the development of tissue polarity. The frizzled proteins contain seven transmembrane domains, a cysteine-rich domain in the extracellular region and a carboxy-terminal Ser/Thr-XXX-Val motif. The proteins in this family function as receptors for Wnt and are generally coupled to G proteins. Frizzleds are members of the G protein-coupled receptor superfamily. Frizzled-2 is expressed in the fetal kidney and lung and in the adult ovary and colon. Frizzled-2 mediates the Wnt/cGMP/Ca<sup>2+</sup> pathway. It binds Wnt proteins and signals by activating the release of stored calcium. Frizzled-2 expression is regulated by Angiotensin II. Activated frizzled-2 suppresses the activity of protein kinase G, and activates NFAT-dependent transcription, the phosphatidylinositol pathway and calcium sensitive enzymes.

### Product:

Rabbit IgG, 1mg/ml in PBS with 0.02% sodium azide, 50% glycerol, pH7.2

### Molecular Weight:

~ 65 kDa

### Swiss-Prot:

Q14332

### Purification&Purity:

The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen and the purity is > 95% (by SDS-PAGE).

### Applications:

IHC: 1:50~1:200

IF: 1:50~1:200

### Storage&Stability:

Store at 4 °C short term. Aliquot and store at -20 °C long term. Avoid freeze-thaw cycles.

### Specificity:

Frizzled-2 (E240) polyclonal antibody detects endogenous levels of Frizzled-2 protein.

### DATA:

### Note:

For research use only, not for use in diagnostic procedure.
