

PRODUCT DATA SHEET

Bioworld Technology CO., Ltd.

IFI-16 (N772) Peptide

Cat No.: BS3865P

Background

Interferon-gamma inducible protein 16 (IFI16) belongs to the HIN-200 family of transcriptional regulator linked to cell cycle regulation and differentiation by modulating the activities of multiple transcriptional factors, such as p53 and Rb. The HIN-200 (hematopoietic interferon-inducible nuclear antigens with 200 amino acid repeat) family members contain a DNA binding domain, a transcriptional regulatory domain, DAPIN/PAAD domain associated with interferon response and a binding domain for BRCA1. IFI16 may have a role in the regulation of hematopoietic cell differentiation and also be involved in DNA repair since it becomes a component of the DNA repair multi-protein BASC complex after UV-induced DNA damage. IFI16 is strongly induced by gamma interferon in vivo.

Swiss-Prot

Q16666

Applications

Blocking

Specificity

This peptide can be used with studies using BS3865 IFI-16 (N772) pAb.

Purification & Purity

Synthetic peptide IFI-16 (N772). (Note: the amino acid sequence is proprietary). The purity is > 98%.

Product

1 mg/ml in DI water.

Storage & Stability

Store at 4 °C short term. Aliquot and store at -20 °C long term. Avoid freeze-thaw cycles.

Research Use

For research use only, not for use in diagnostic procedure.
