

## **NEK2 Recombinant Rabbit mAb**

This gene encodes a serine/threonine-protein kinase that is involved in mitotic regulation. This protein is localized to the centrosome, and undetectable during G1 phase, but accumulates progressively throughout the S phase, reaching maximal levels in late G2 phase. Alternatively spliced transcript variants encoding different isoforms with distinct C-termini have been noted for this gene. [provided by RefSeq, Feb 2011] <b>Product:</b> Store at -20 °C. Supplied in 50mM Tris-Glycine(pH 7.4),	100- 130- 130- 72- 55-
