

PRODUCT DATA SHEET

Bioworld Technology CO., Ltd.

p-AR (Y363) Peptide

Cat No.: BS4650P

Background

Androgens exhibit a wide range of effects on the development, maintenance and regulation of male phenotype and reproductive physiology in males. The androgen receptor (AR) is a member of the steroid superfamily of ligand-dependent transcription factors. ARs bind active testosterone (T) and dihydrotestosterone (DHT). The rates of association and dissociation of T are about 3 times more rapid than those of DHT. This difference in binding kinetics may account for the different physiological effects of T and DHT. Androgen binding results in an at least 6-fold increase in androgen receptor stability.

Swiss-Prot

P10275

Applications

Blocking

Specificity

This peptide can be used with studies using BS4650 p-AR (Y363) pAb.

Purification & Purity

Synthetic peptide p-AR (Y363). (Note: the amino acid sequence is proprietary). The purity is > 98%.

Product

1 mg/ml in DI water.

Storage & Stability

Store at 4 °C short term. Aliquot and store at -20 °C long term.

Avoid freeze-thaw cycles.

Research Use

For research use only, not for use in diagnostic procedure.
