

Gab1 (phospho-Y659) polyclonal antibody

Catalog: BS4689

Host: Rabbit

Reactivity: Human, Mouse, Rat

BackGround:

Gab 1 (GRB2-associated binder 1), one such member of the IRS family, plays an important role in cellular growth response, transformation and apoptosis. Gab 1 is a multi-substrate docking protein that functions downstream in the signaling pathways of different receptor kinases, including EGFR. Gab1 is tyrosine phosphorylated normally in response to insulin and consequently enhances phosphatidylinositol 3-kinase (PI3K) binding. In response to osmotic shock, tyrosine-phosphorylated Gab 1 (p-Gab 1) also binds and activates phosphatidylinositol 3-kinase, suggesting that Gab 1 is the major site for PI3K recruitment following osmotic shock stimulation.

Product:

1 mg/ml in Phosphate buffered saline (PBS) with 0.05% sodium azide, approx. pH 7.2.

Molecular Weight:

~ 76, 110 kDa

Swiss-Prot:

Q13480

Purification&Purity:

The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen and the purity is > 95% (by SDS-PAGE).

Applications:

WB: 1:500~1:1000

IHC: 1:50~1:200

Storage&Stability:

Store at 4 °C short term. Aliquot and store at -20 °C long term. Avoid freeze-thaw cycles.

Specificity:

p-Gab1 (Y659) polyclonal antibody detects endogenous levels of Gab1 protein only when phosphorylated at Tyr659.

DATA:

Western blot (WB) analysis of p-GAB1 (Y659) polyclonal antibody at 1:500 dilution

Lane1:Hela cell lysate treated with insulin(100nM,15mins)

Lane2:Raw264.7 cell lysate treated with insulin(100nM,15mins)

Lane3:H9C2 cell lysate treated with insulin(100nM,15mins)

Note:

For research use only, not for use in diagnostic procedure.
