

LIM Kinase 1 Recombinant Rabbit mAb

Catalog: BS47914

Host: Rabbit

Reactivity: Human, Mouse

BackGround:

There are approximately 40 known eukaryotic LIM proteins, so named for the LIM domains they contain. LIM domains are highly conserved cysteine-rich structures containing 2 zinc fingers. Although zinc fingers usually function by binding to DNA or RNA, the LIM motif probably mediates protein-protein interactions. LIM kinase-1 and LIM kinase-2 belong to a small subfamily with a unique combination of 2 N-terminal LIM motifs and a C-terminal protein kinase domain. LIMK1 is a serine/threonine kinase that regulates actin polymerization via phosphorylation and inactivation of the actin binding factor cofilin. This protein is ubiquitously expressed during development and plays a role in many cellular processes associated with cytoskeletal structure. This protein also stimulates axon growth and may play a role in brain development. LIMK1 hemizygosity is implicated in the impaired visuospatial constructive cognition of Williams syndrome. Alternative splicing results in multiple transcript variants encoding distinct isoforms.[provided by RefSeq, Feb 2011]

Product:

Store at -20 °C. Supplied in 50mM Tris-Glycine(pH 7.4),

0.15M NaCl, 40%Glycerol, 0.01% sodium azide and 0.05% BSA. Stable for 12 months from date of receipt.
Molecular Weight:
73 kDa
Swiss-Prot:
P53667
Purification&Purity:
Affinity Purification
Applications:
WB: 1:1000-1:5000
Storage&Stability:
Store at 4 °C short term. Aliquot and store at -20 °C long term. Avoid freeze-thaw cycles.
Isotype:

IgG

DATA:

Note:

For research use only, not for use in diagnostic procedure.
