

Androgen Receptor(AR-V7 specific) Recombinant Rabbit mAb

Catalog: BS49195

Host: Rabbit

bit

Reactivity: Human

BackGround:

The androgen receptor gene is more than 90 kb long and codes for a protein that has 3 major functional domains: the N-terminal domain, DNA-binding domain, and androgen-binding domain. The protein functions as a steroid-hormone activated transcription factor. Upon binding the hormone ligand, the receptor dissociates from accessory proteins, translocates into the nucleus, dimerizes, and then stimulates transcription of androgen responsive genes. This gene contains 2 polymorphic trinucleotide repeat segments that encode polyglutamine and polyglycine tracts in the N-terminal transactivation domain of its protein. Expansion of the polyglutamine tract from the normal 9-34 repeats to the pathogenic 38-62 repeats causes spinal bulbar muscular atrophy (SBMA, also known as Kennedy's disease). Mutations in this gene are also associated with complete androgen insensitivity (CAIS). Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by Ref-Seq, Jan 2017]

Product:

Store at -20 °C. Supplied in 50mM Tris-Glycine(pH 7.4),

0.05% BSA. Stable for 12 months from date of receipt. Molecular Weight: 80 kDa Swiss-Prot: P10275-3 Purification&Purity: Affinity Purification Applications: WB: 1:1000
ICC/IF: 1:100
FC: 1:20 Storage&Stability: Store at 4 °C short term. Aliquot and store at -20 °C long term. Avoid freeze-thaw cycles. Isotype:

0.15M NaCl, 40% Glycerol, 0.01% sodium azide and

isotyp

IgG

DATA:

Note:

For research use only, not for use in diagnostic procedure.
