

GUSB polyclonal antibody

Catalog: BS61590

Host: Rabbit

Reactivity: Human, Mouse, Rat

Background:

The enzyme β -glucuronidase catalyzes the conversion of β -D-glucuronoside and water to an alcohol and D-glucuronate. Deficiency of β -glucuronidase is the cause of the human lysosomal storage disorder mucopolysaccharidosis type VII (MPS VII). Specifically, two residues appear important for catalytic activity: Glu 451 and Glu 540. Mutations at these sites affect the overall structure of the protein, which normally consists of a homotetramer with each promoter including a jelly roll barrel, an immunoglobulin constant domain and a TIM barrel. Regulation of β -glucuronidase activity may play a role in tumorigenesis and the invasiveness of a number of cancers, and is also an important factor in the development of functional prodrugs that require the cleavage of an active cytostatic by endogenous enzymes for antitumor activity.

Product:

Rabbit IgG, 1mg/ml in PBS with 0.02% sodium azide, 50% glycerol, pH7.2

Molecular Weight:

~ 74 kDa

Swiss-Prot:

P08236

Purification&Purity:

The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen and the purity is > 96% (by SDS-PAGE).

Applications:

WB: 1:500~1:1000

Storage&Stability:

Store at 4 °C short term. Aliquot and store at -20 °C long term. Avoid freeze-thaw cycles.

Specificity:

GUSB polyclonal antibody detects endogenous levels of GUSB protein.

DATA:

Western blot (WB) analysis of GUSB polyclonal antibody at 1:500 dilution

Lane1:HepG2 whole cell lysate(40ug)

Lane2:The liver tissue lysate of Fetal Mouse(40ug)

Lane3:The liver tissue lysate of Fetal Rat(40ug)

Note:

For research use only, not for use in diagnostic procedure.
