

EIF2S2 polyclonal antibody

Catalog: BS61711

Host: Rabbit

Reactivity: Human, Mouse, Rat

Background:

The initiation of protein synthesis in eukaryotic cells is regulated by interactions between protein initiation factors and RNA molecules. The eukaryotic initiation complex eIF2 exists as a heterotrimeric complex of eIF2 α , eIF2 β and eIF2 γ . eIF2 functions in the early stages of protein synthesis, by forming a ternary complex with GTP and tRNA. This complex binds to the 40S ribosomal subunit, followed by mRNA binding to 40S to form the 43S preinitiation complex, the release of eIF2 from 40S, and the hydrolysis of GTP. Phosphorylation of eIF2 α correlates with inhibition of translation initiation.
