

IL5 polyclonal antibody

Catalog: BS70862

Host: Rabbit

Reactivity: Human, Mouse, Rat

BackGround:

This gene encodes a cytokine that acts as a growth and differentiation factor for both B cells and eosinophils. The encoded cytokine plays a major role in the regulation of eosinophil formation, maturation, recruitment and survival. The increased production of this cytokine may be related to pathogenesis of eosinophil-dependent inflammatory diseases. This cytokine functions by binding to its receptor, which is a heterodimer, whose beta subunit is shared with the receptors for interleukin 3 (IL3) and colony stimulating factor 2 (CSF2/GM-CSF). This gene is located on chromosome 5 within a cytokine gene cluster which includes interleukin 4 (IL4), interleukin 13 (IL13), and CSF2. This gene, IL4, and IL13 may be regulated coordinately by long-range regulatory elements spread over 120 kilobases on chromosome 5q31.

Product:

Rabbit IgG, 1mg/ml in PBS with 0.02% sodium azide, 50% glycerol, pH7.2

Molecular Weight:

~ 15 kDa

Swiss-Prot:

P05113

Purification&Purity:

The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen and the purity is > 95% (by SDS-PAGE).

Applications:

WB 1:500 - 1:2000

IHC 1:50 - 1:200

Storage&Stability:

Store at 4 °C short term. Aliquot and store at -20 °C long term. Avoid freeze-thaw cycles.

Specificity:

IL5 polyclonal antibody detects endogenous levels of IL5

protein.

DATA:

Western blot analysis of extracts of various cell lines, using IL5 antibody.

Immunohistochemistry of paraffin-embedded human liver using IL5 antibody at dilution of 1:100 (40x lens).

Immunohistochemistry of paraffin-embedded human stomach using IL5 antibody at dilution of 1:100 (40x lens).

Note:

For research use only, not for use in diagnostic procedure.
