

**ZNRF1 polyclonal antibody**

Catalog: BS76542

Host: Rabbit

Reactivity: Human, Mouse, Rat

**BackGround:**

This gene encodes an E3 ubiquitin-protein ligase that plays a role in neural-cell differentiation. Overexpression of this gene causes neurite-like elongation. The encoded protein contains both a zinc finger and a RING finger motif and is localized in the endosome/lysosome compartment, indicating that it may be involved in ubiquitin-mediated protein modification, and in synaptic vesicle membranes in neurons.
